

# PHP ASSIGNMENT

## task 1

# About the website

The Student Information System is a web-based platform designed for schools. It helps manage students, teachers, classes, assignments and grades. The goal is to make daily tasks easier and more organised for all users.

## Key Goals of the website:

- Admins can manage all accounts, classes, and data in one secure system.
- Teachers can create assignments, upload materials, and grade student work.
- Students can see assignments, upload their work, and check grades.
- The website will reduce paperwork and make the process faster and more efficient.
- Users will have their own login accounts with different permissions (admin, teacher, student).
- The website will be easy to use, with a simple design that anyone can understand.

## 2. Purpose of the website

The main purpose is to replace paper-based systems and manual work with a faster and more efficient platform. It reduces mistakes, saves time, and improves communication between students, teachers, and admins.

# Target Audience

There are three main types of users:

## 1. Admins

- They have full control over the system.
- Can add or remove students, teachers, and classes.
- Can send announcements or notifications to everyone.

## 2. Teachers

- Can upload learning materials like PDFs or PowerPoints.
- Can create assignments with a deadline.
- Can grade student work and give feedback.
- Can see which students are in each class.

## 3. Students

- Can view and download assignments.
- Can submit answers before the deadline.
- Can see their grades and whether they passed or failed.
- Can receive notifications about new assignments or grades.

# Features that will be added

## 1. User Login

- Students, teachers, and admins can log in with their email and password.

## 2. Dashboard for Each Role

- Admin, teacher, and student will each have their own simple dashboard.

## 3. Manage Users

- Admin can add, edit, and delete student and teacher accounts.

## 4. Manage Classes

- Admin can create classes and assign teachers or students to them.

## 5. Assignments

- Teachers can upload assignments.

- Students can see assignments and submit their work.

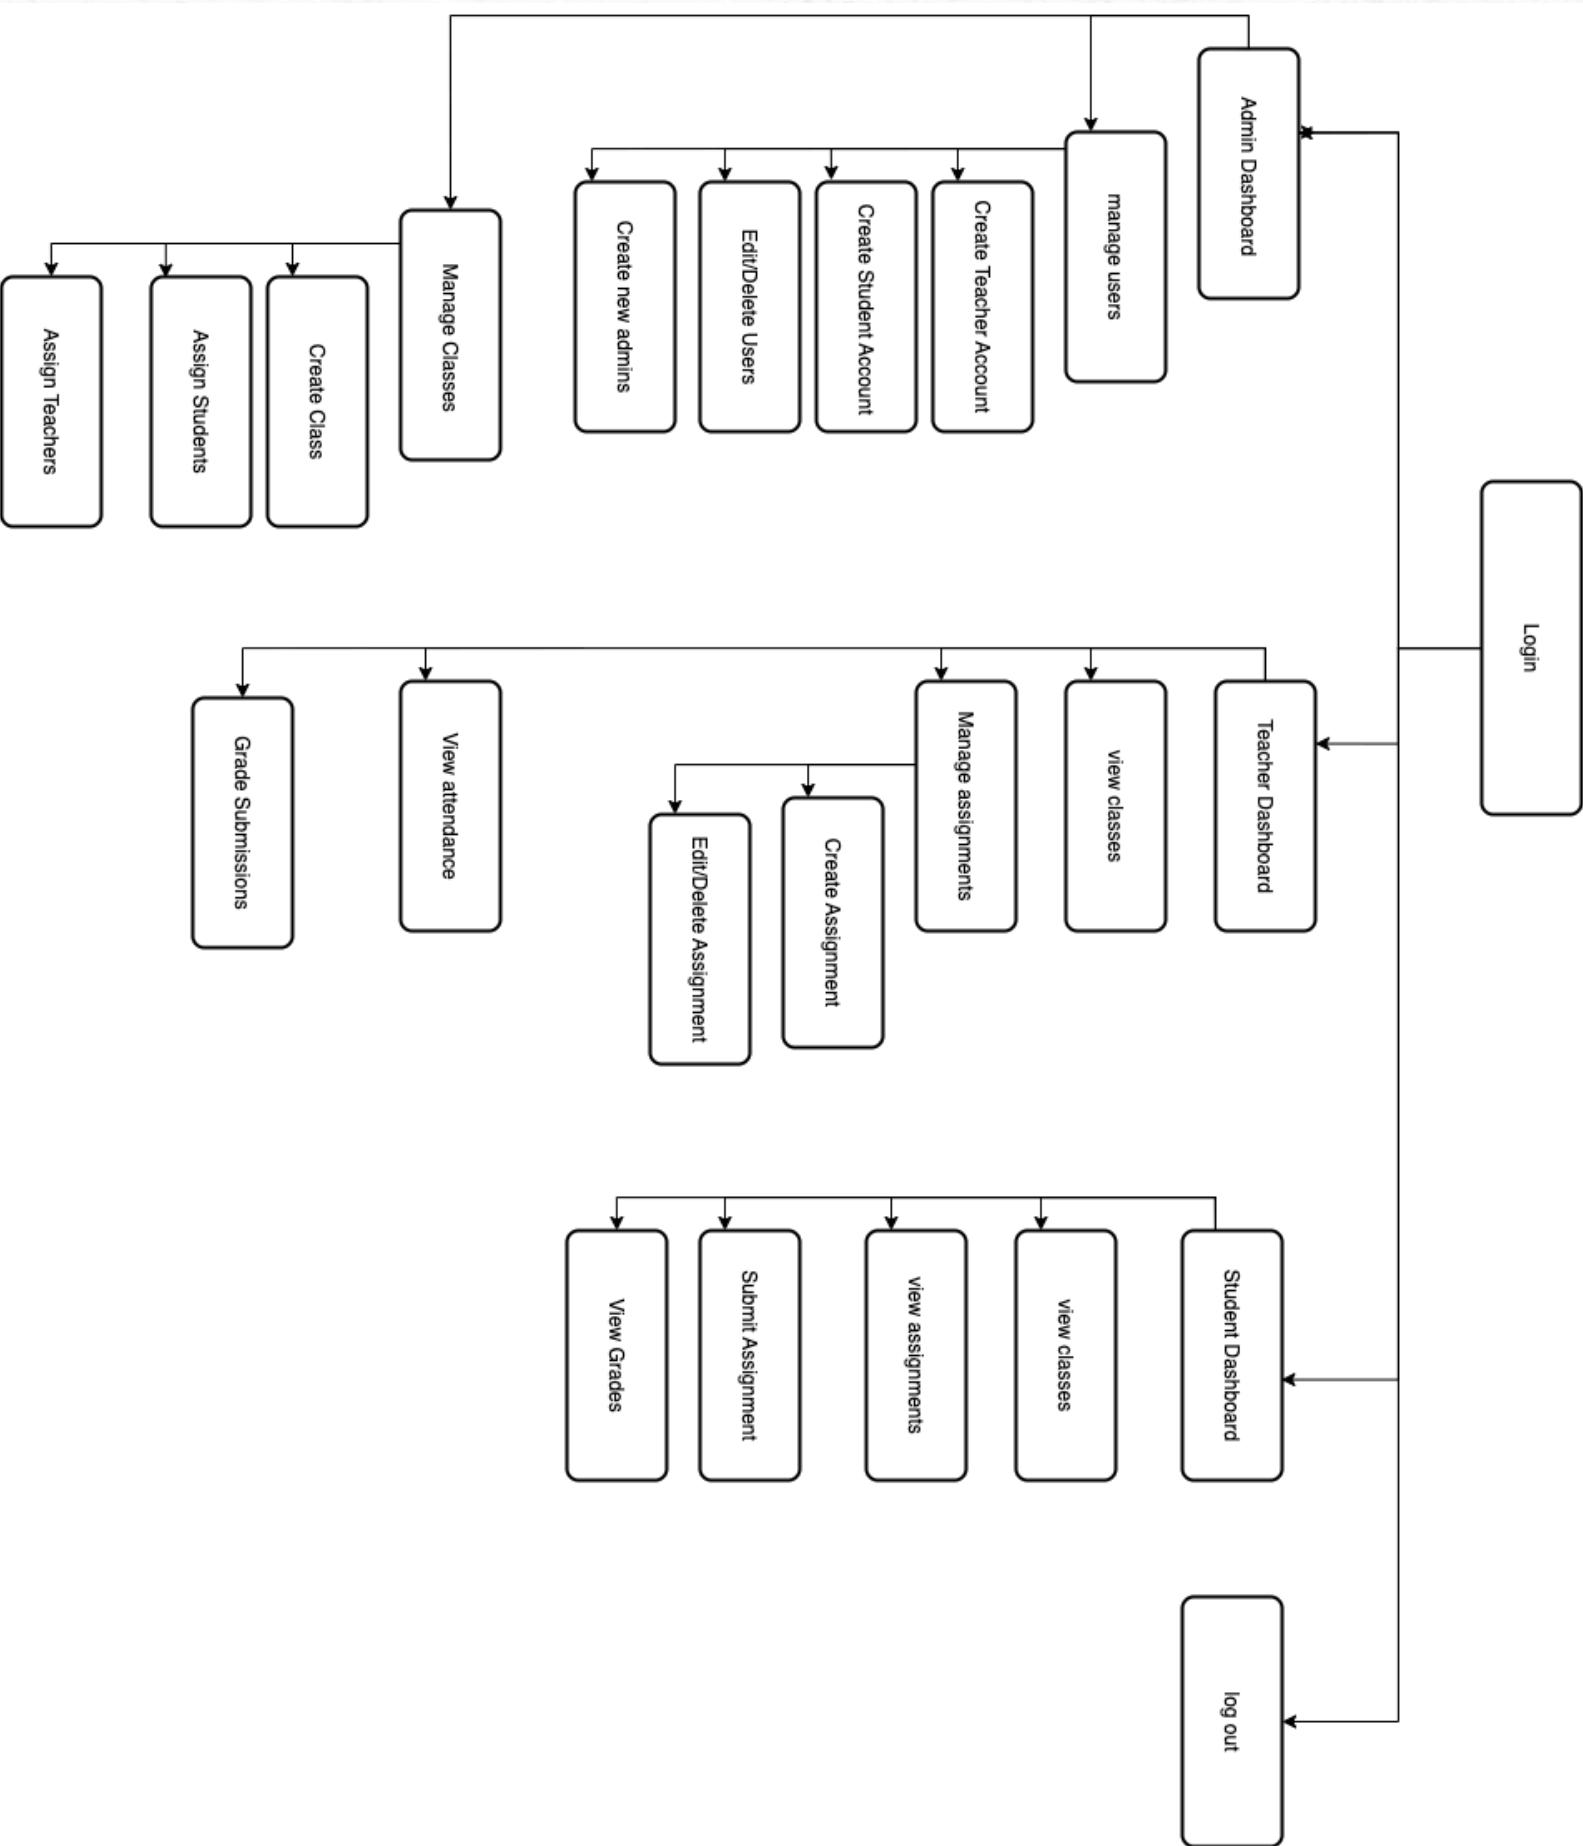

## 5. Grades

- Teachers can give marks.

- Students can check if they passed or failed (Pass = 50 or more).

The features were added to make school work easier and more organised. Login is important because it keeps the system safe, so only the right people can use it. Dashboards help users find what they need quickly. Manage users and classes helps admins keep track of students and teachers. Assignments let teachers share work with students online, which saves time. Grades are important because students can see their marks and teachers can store all results in one place. These features are simple but very useful for everyone.
